THE TRAIN
ESCAPE TO NORMANDY

QUICK START GUIDE

We recommend reviewing the manual for this game before playing – as with many games of this time period, not everything you need to know is explained by the game itself. An updated version of the game's original manual, a keyboard layout map, and an image of the map of the game's train routes are included in the Extras on GOG and the game's install directory.

DOSBOX TIPS

To make this game playable on modern systems, this version of The Train is played through DOSBox. Launch options from Steam are included for full screen and multiple windowed resolutions.

USEFUL DOSBOX SHORTCUTS

- While in windowed mode, Control+F10 toggles locking the mouse to the window. The mouse is not used for gameplay or menu navigation in The Train, but using this to prevent the mouse from wandering outside the game area onto anything outside the game window may still be helpful to ensure the game does not lose focus while playing.
- Alt+Enter can be used to switch between windowed and full screen mode while in any resolution view. This is also useful to use after exiting the game in full screen mode to close the DOSBox window.

DOSBOX OPTIMIZATIONS (RECOMMENDED FOR ADVANCED USERS)

You can make adjustments to show the game runs via the .conf file for each resolution in the install directory's dosbox_windows folder. We recommend backing up any files before changing them, as changes could produce undesired effects.

FULL SCREEN MODE

If you are having trouble running the game at full screen, you may want to change the fullresolution parameter in the dosbox_fs.conf (and any other .conf files you use to launch the game). We found that most systems run best with this parameter set to fullresolution=desktop, so we made this the default value, but we have seen some configurations (like the Surface Pro X) where changing this parameter to fullresolution=original was necessary for the game to run properly.
